

The issues of environmental protection and sustainable development have been widely concerned. D-TEX Nonwovens has rooted in the field of spunlace nonwovens for more than ten years, combining our own technology and equipment advantages, and has developed a variety of 100% biodegradable non-woven new materials. We have searched for many different fiber materials, after hundreds of trials, tests, and comparisons. Finally, it was found that after spunlaced Tencel and PLA fiber with liquid wood pulp, the style, water absorption, and tensile strength of the fabric surface were very stable. It is worth mentioning that these materials are 100% biodegradable and have zero burden on the environment. It can be widely used in sanitary materials, wet wipes, dry wipes, and other cleaning purposes.

100% biodegradable

Composition	Woodpulp/Viscose	Woodpulp/Lyocell	Woodpulp/PLA, etc.
Width	260cm		320cm
Surface	Plain, Patterns		
Basic weight	40gsm~70gsm		
Color	White, Natural		

Idea for

Toilet wipes, Baby wipes, Flushable wet wipes, Household cleaning wipes, Medical wipes, Disinfection wipes;
